### Personal Projects

#### Three e-books

#### Freely explored math, physics, and programming with raw intellect

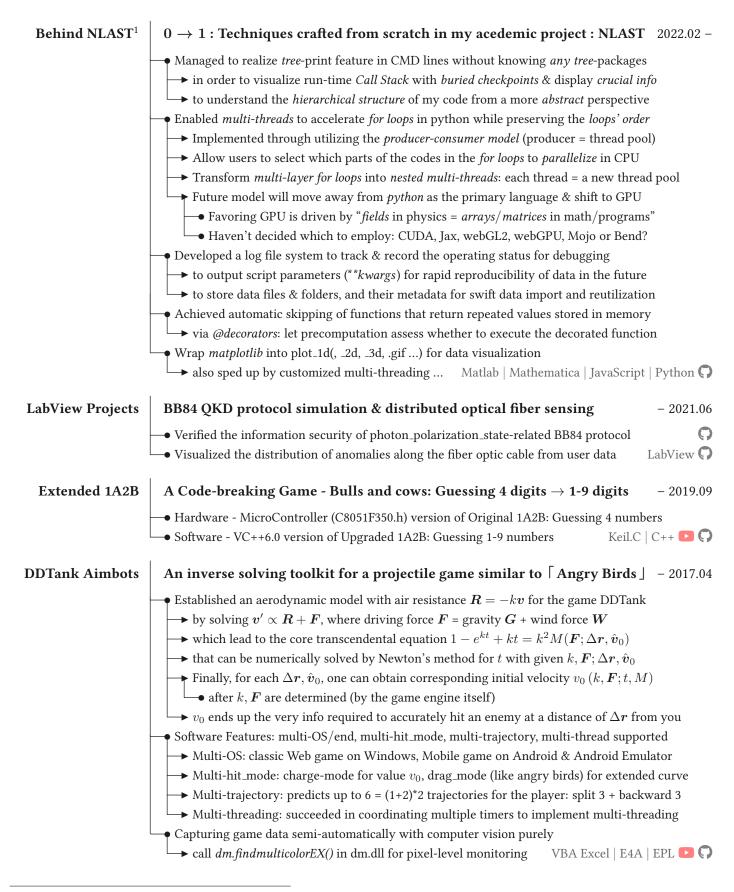

- 2017.08

- Book 1: mainly on mathematics, some intriguing chapters are:
- Multinomial theorem:  $(\Sigma_{i=1}^n a_i)^m = \Sigma \frac{m!}{\prod_{i=1}^n b_i!} \prod_{i=1}^n a_i^{b_i}$  over  $\{b_i \geq 0\}$ , where  $\Sigma_{i=1}^n b_i = m$ Strive to get the general formula for the n-th derivatives  $f(g(x))^{(n)}$  of a composite function
- → Connection between the sums of certain series and the indefinite integrals of their terms
- ightharpoonup Explaining Euler's formula a+b-c=n through topology
- → Retracing the birth of the determinant calculation rules
- Pook 2: up to 12 programs designed to solve mathematical / physical problems
  - Multinomial theorem  $\Longrightarrow$  Microstate count  $\Omega_l = \frac{(g_l + a_l 1)!}{(g_l 1)!a_l!}$  of Bose-Einstein systems
  - lacktriangle All solutions  $\{b_i\}$  that meet the condition  $\Sigma_{i=1}^m i \cdot b_i = m$  of the Faà di Bruno Formula
  - ightharpoonup Deep recursion algorithms for partition number P(n) & all the aforementioned contexts
  - → General solution  $\{x_i\}$  of multivariable linear Diophantine equation  $\sum_{i=1}^n a_i \cdot x_i = b$
  - ightharpoonup Complete solution  $v_{
    m max}, v_{
    m min}$  to the Double Comb/Ruler problem

Minimum integer solution x, y of linear Diophantine equation  $a \cdot x + b \cdot y = c$ 

• Book 3: geometry-related mathematics & physics

- → Spherical trigonometry: from which I designed a non-Euler\_angle rotation operator for NLAST
  - ullet which converts direction  $heta,\phi$  of a 3D real vector  $oldsymbol{v}$  between two coordinate systems
- ➤ Special relativity: Had it been animated (by Manim?), it would have looked stunning
