- First & fastest white box solver ever for this inhomogeneous wave equation or other similar equations, with unprecedented efficiency-accuracy product
- No competitors for the time being: other methods or software including
 k-space RK4, pseudo-spectral, SSF, Green's Function methods, FDTD, COMSOL...
- Reproduced well-known papers, all of which provide either zero or wrong theory:
 - o Nat.Photo. #proven theoratically wrong by this project #femtosecond pump

Behind NLAST ²	0 o 1 : Techniques crafted from scratch in my acedemic project : NLAST	2022.02 –				
	Managed to realize <i>tree</i> -print feature in CMD lines without knowing <i>any tree</i> -packages					
	in order to visualize run-time Call Stack with buried checkpoints & display crucial info					
	to understand the <i>hierarchical structure</i> of my code from a more <i>abstract</i> perspective					
	• Enabled <i>multi-threads</i> to accelerate <i>for loops</i> in python while preserving the <i>loops' order</i>					
	→ Implemented through utilizing the <i>producer-consumer model</i> (producer = thread pool)					
	→ Allow users to select which parts of the codes in the <i>for loops</i> to <i>parallelize</i> in CPU → Transform <i>multi-layer for loops</i> into <i>nested multi-threads</i> : each thread = a new thread pool					
	Future model will move away from <i>python</i> as the primary language & shift to GPU					
	• Favoring GPU is driven by "fields in physics = arrays/matrices in math/programs"					
	→ Haven't decided which to employ: CUDA, Jax, webGL2, webGPU, Mojo or Bend?					
	Decided to try some existing packages developed by flatiron institute					
	Developed a log file system to track & record the operating status for debugging					
	→ to output script parameters (**kwargs) for rapid reproducibility of data in the future					
	to store data files & folders, and their metadata for swift data import and reutilization Achieved automatic skipping of functions that return repeated values stored in memory					
	via @decorators: let precomputation assess whether to execute the decorated function Wrap matplotlib into plot_1d(, _2d, _3d, .gif) for data visualization
